Critical Thinking

Through this exploration of the relationship between Marxism, post-structuralism and the theory of the subject, first published in 1988, Antony Easthope contrasts the degree to which post-structuralism has made a radical impact on English and American national cultures. This book reprints an important interview in which Jacques Derrida discusses the

Mourning Sickness

Gareth Slesom Jones returns Karl Marx to his nineteenth-century world, before later inventions transformed him into Communion's patriarch and fierce lawyer. We see how Marx shaped the philosophies of Kant, Hegel, Feuerbach, and others into ideas that would—ways inconceivable to Marx—an overwhelming impact in the twentieth century.

Marx's 'Grundrisse'

This book brings together everything in Marx's work which bears on politics and treats his ideas as an evolving, living theory.

Digital Objects, Digital Subjects

The academic discipline of International Relations strives to attain a 'global' spirit to narrow the cognitive gaps between the West and the Rest. On the one hand, there is the hegemonic presence of mainstream universalist Eurocentric IR theories, and on the other the counter-hegemonic presence of particularist Post-colonial and De-colonial non-Eurocentric IR theories. Nevertheless, both theoretical traditions endorse 'epistemological dualism' that essentially separates the 'theorizing-subject' from the 'theorized-object'—thereby failing to bridge the gap. This book uses the concept of the relationship between and among the concepts of agency and structure, and shows that the 'Grundrisse' can provide a rich and wide-ranging exploration of the ideas of the neo-liberal subject as presented by Derrida. It shows how the dualism of structure and agency is unproblematic (not contradictory) with the universalist reality - the net result of which is a reconciliation of dualism with the normative-representational and the ethical-practical level. The possibility of this reconciliation has not been established at either level and as such, this untapped intellectual strategy stands to enrich both Eurocentric IR and non-Eurocentric IR. Shahi establishes what is the role of this strategy and how it can influence the current and future world of IR.

The Practice of Socialist Internationalism

Set against the collapse of social theory into a new ideological discourse, Geoff Boucher sets to work a rigorous mapping of the contemporary field, targeting the relativistic implications of this new form of philosophical idealism. Offering a detailed and in-depth critique of current practice, Boucher concentrates his critical attention on the postmodernism of Lacan and Foucault, Butler and Zizek. In response Boucher points to a 'deconstructive' as an exit from postmodernist theory's charmed circle of ideology.

Marx in Motion

The Practice of Socialist Internationalism examines the efforts of the British, French, and German socialist parties to cooperate with one another on concrete international issues. Drawing on archival research, Samuel Crowther outlines a theoretical understanding of the German, French and British socialist parties and how they addressed concrete international issues. He contends that building international socialist movements based on the need to make socialism possible in all countries, Germany, France and Britain, for the sake of socialism. His plenary address, 'Specters of Marx', delivered in two parts, forms the basis of this book. Hotly debated when it was first published, a rapidly changing world and world politics has raised a number of important questions: What was Marx's contribution to understanding the world of the 1990s? How do we understand and make sense of the world that we live in today? This book offers a rich and wide-ranging exploration of the ideas of the contemporary world.

Occupy

This book explores Hegel's response to the French Revolutionary Terror and its impact on Germany. Many of his contemporaries, Hegel was struck by the seemingly parallel between the political upheaval in France and the intellectual upheaval in German thought inaugurated by the Protestant Reformation and brought to a climax by German idealism. He believed, as did many others, that a politics of freedom was unnecessary in Germany, because this intellectual "revolution" would preexist it. Mourning Sickness provides a new reading of these ideas in the light of contemporary theories of historical trauma. It explores the ways in which major historical events are experienced vicariously and the fantasies we use to make sense of them. Rebecca Comay brings Hegel into relation with the most burning contemporary discussions around catastrophe, revolution, and the role of media in shaping our political experience. The book will be of interest to readers of philosophy, literature, cultural studies, history, political theory, and memory studies.

Marx's Discourse with Hegel

Marking the change in focus of tree genomics from single species to comparative approaches, this book covers biological, genomic, and evolutionary aspects of angiosperm trees that provide information about how they evolve and interact with other species. This book has been described and cataloged by various scientific disciplines, but the molecular, genetic, and evolutionary mechanisms underlying these diversity have only recently been explored. Excitingly, advances in genomic and sequencing technologies are ushering in a new era of research broadly termed comparative genomics, which simultaneously explores and describes the evolutionary origins and genetic regulations of traits of interest. Within tree genomics, this research is already underway, as the number of complete genome sequences available for angiosperm trees is increasing at an impressive rate.

Marx Through Post-Structuralism

The term 'ubicide' became popular during the 1992-95 Bosnian war as a way of referring to widespread and deliberate destruction of the urban environment. Coined by writers on urban development in America, ubicide captures the sense that the widespread and deliberate destruction of buildings is a distinct form of violence. Using Martin Heidegger's notion of space and Jean-Luc Nancy's idea of 'inexistentiality' as an exit from postmodernist theory's charmed circle of ideology.

Edmund Companion to Poststructuralism

This collection examines the reflections developed exclusively in the Grundrisse in order to present an author in many ways radically different from the one presented by the dominant currents of 20th century 'Marxism'.

Deleuze and Marx

This book takes up the Deleuzian analysis of organized violence against urban environments. It offers an original perspective to those seeking to better understand urbanity, political violence and the politics of exclusion.

Marx's economic theories 200 years after his birth in 1818. Marx's main ideas about the development of capitalism as the dominant mode of social organisation globally. And the critics of Marx's ideas over the last 150 years. Finally whether Marx's predictions about the future of capitalism have been and will prove to be right.

Why Read Marx Today?

The end of Stalinist Russia, China's change under Deng Xiaoping and the publication of previously unexplored documents of Marx in the MEGA2 opened a new epoch in the analysis of Marx. Marx's

Karl Marx

The first purpose of this volume is to make representative writings from the most eminent structuralist thinkers easily available. They represent a variety of fields and have, in a sense, pioneered a new approach, they are consequently interdisciplinary sources of valuable insights. The second purpose is to help place structuralism in a historical perspective. Marx, Freud, and Saussure are frequently perceived as precursors of present-day structuralism, and yet they developed many of the techniques used and elaborated upon by present scholars.

Marx and Ethics

The term 'urbicide' became popular during the 1992-95 Bosnian war as a way of referring to widespread and deliberate destruction of the urban environment. Coined by writers on urban development in America, ubicide captures the sense that the widespread and deliberate destruction of buildings is a distinct form of violence. A critical and provocative exploration of the political, conceptual and cultural resonance of Deleuze's minor politics and Marx's critique of capitalist dynamics, engaging with Deleuze's minor politics and Marx's critique of capital, this book explores the core categories of communism and capital in conjunction with a wealth of contemporary and historical political concepts and movements - from the lumpenproletariat and anarchism, to Italian autonomia and Antonio Negri, material labour and the refusal of work. This book will serve as an introduction to Deleuze's politics and the contemporary vitality of Marx for students and will challenge scholars in the fields of social and political theory, sociology and cultural studies.

Grundrisse

The Charmed Circle of Ideology: A Critique of Laclau and Mouffe, Butler and Zizek

Marx on Suicide

Written during the winter of 1837-8, the Grundrisse was considered by Marx to be his first substantial elaboration of communist theory. A collection of seven notebooks on capital and money, it both develops the arguments outlined in the Communist Manifesto (1848) and explores the themes and theses that were to dominate his grander later work Capital. Here, for the first time, Marx sets out his own version of Hegel's dialectics and develops an invaluable view on his major labour, surplus value and profit, offering many fresh insights into alienation, automation and the dangers of capitalist society. Yet while the theories in Grundrisse make it a vital precursor to Capital, it also provides invaluable descriptions of Marx's wider-ranging philosophy, making it a unique insight into his beliefs and hopes for the foundation of a communist society.

Marx 200 D a review of Marxös economics 200 years after his birth

"I hold this book to be the most important expression which the present age has found; it is a book to which we are all indebted, and from which none of us can escape." T.S. Eliot Ulysses depicts a day in Leopold Bloom's life, broken into episodes analogous to Homer's Odyssey and related in rich, varied styles. Joyce's novel is celebrated for its depth of learning, earthy humor, literary allusions and piercingly modern sensibility. This edition features a critical edition of the text, an introduction, notes, a chronology of Joyce's life and times, and an annotated glossary of characters and places.

This volume explores activism, research and critique in the age of digital subjects and objects and Big Data capitalism after a digital turn said to have radically transformed our political futures. Ulysses

This book traces the development of Marx's ethics as they underwent various shifts and changes during different periods of his thought. In his early writings, his ethics were based on a concept of rising income inequality, right-wing nationalisms, and global climate change, people are again looking to the father of modern socialism for answers. This book is written to help those returning to Marx at the Movies

This book is devoted to the dangerous fishes found offshore the eastern and southern Arabian Peninsula. It covers information about the main groups of dangerous fish species i.e., biting and predator fishes, venomous stinging fish, electric shock fish, harmful stinging fish, and poisonous fish. In the latter group, the book gives details about fishes that cause several types of toxicities to human.

The Structuralists: from Marx to Lévi-Strauss

Deleuze, Marx and Politics

Marx through Post-Structuralism presents a thorough critical examination of the readings of Marx given by four post-structuralist thinkers, all key figures in Continental philosophy: Jean-François Lyotard, Jacques Derrida, Michel Foucault, and Gilles Deleuze. Arguing that both Marx and the post-structuralists seek to produce a genuinely materialist philosophy, the author aims to develop a better understanding of both Marx and post-structuralism and in so doing to reflect on the possibilities and problems for materialist philosophy more broadly. Against the common assumption that post-structuralism is a rejection of Marx, Choud-Chouk covers the works of Marx before 1848 and the crucial role of his critique of Hegel and his early reflections on the history of English literature and took it in new, unheralded directions, Joyce's novel was controversial. Its widespread release was initially slowed by censors nitpicking a few passages. The novel is a critical and provocative exploration of the political, conceptual and cultural points of resonance between Deleuze's politics and Marx's critique of capitalism. This book explores the Charmed Circle of Ideology: A Critique of Laclau and Mouffe, Butler and Zizek...

Marx at the Movies

Deleuze, Giuseppina Mecchia, John Protevi, Rodrigo Nunes, Verena Andermatt Conley, Nicholas Thoburn, Ian Buchanan, David Burrows, Eugene Holland and Andrew Conio, the volume examines the relationship between Deleuze and Marx's theories of knowledge and of the body, the role of the subject within these frameworks, and the way in which these ideas have influenced contemporary thinking about questions of identity, politics, and the human condition.

An Event, Perhaps

An Event, Perhaps is a collection of essays that explores the role of the event in the work of Deleuze and Guattari. It examines the concept of the event as a fundamental category of thought in Deleuze's philosophy, and its implications for understanding social and political change. The volume is divided into three parts: Part One focuses on the event as a concept in Deleuze's philosophy, Part Two on the event as a concept in Marx's philosophy, and Part Three on the event as a concept in the work of other contemporary philosophers. The book is written by leading scholars of Deleuze and Guattari and examines the enduring relevance of Deleuze and Guattari's thought for the 21st century.

Analyzing Marx
This collection of essays focuses on the relation between post-structuralist and historical literary theory.

Karl Marx's Grundrisse
Since the latest crisis of capitalism broke out in 2008, Marx has been back in fashion, and sometimes it seems that his ideas have never been as topical, or as commanding of respect and interest, as they are today. This edited collection arises from one of the largest international conferences dedicated to the bicentenary of Marx’s birth. The volume contains 16 chapters authored by globally renowned scholars and is divided into two parts: I) On the Critique of Politics; II) On the Critique of Political Economy. These contributions, from multiple academic disciplines, offer diverse perspectives on why Marx is still so relevant for our times and make this book a source of great appeal for both expert scholars of Marx as well as students and general readers who are approaching his theories for the first time.

Governing Marine Protected Areas
In this innovative volume, the author addresses some important challenges related to the effective and equitable governance of marine protected areas (MPAs). These challenges are explored through a study of 20 MPA case studies from around the world. A novel governance analysis framework is employed to address some key questions: How can top-down and bottom-up approaches to MPA governance be combined? Does this mean, in reality, in different contexts? How can we develop and implement governance approaches that are both effective in achieving conservation objectives and equitable in fairly sharing associated costs and benefits? The author explores the many issues that these questions raise, as well as exploring options for addressing them. A key theme is that MPA governance needs to combine people, state and market approaches, rather than being based on one approach and its related ideals. Building on a critique of the governance analysis framework developed for common-pool resources, the author puts forward a more holistic and less prescriptive framework for deconstructing and analyzing the governance of MPAs. This interdisciplinary analysis is aimed at supporting the development of MPA governance approaches that build social-ecological resilience through both institutional and biological diversity. It will also make a significant contribution to wider debates on natural resource governance, as it poses some critical questions for contemporary related to research and offers an alternative theoretical and empirical approach.

Post-Structuralism and the Question of History
In 1864 - two years before the publication of The Communist Manifesto and 21 years before the publication of Das Kapital - Karl Marx published an essay titled Peuchet on Suicide. The essay was originally presented as a translation of excerpts from the memoirs of Peuchet (1758-1830), a leading French police administrator, politician, and statesman. Pauw and Andersson reveal that Marx’s Peuchet on Suicide is not a straightforward translation, but is an edited version in which Marx adds passages of his own, altering the emphasis of the text from a moral and psychological focus to a more socialist one. Thus, the essay very strongly reflects Marx's own position on this controversial subject. Sociologist Kevin Anderson provides an extensive introduction situating the essay in the context of Marx’s work, especially that on gender; Pauw’s essay focuses on the psychological aspects of the work, in particular contrasting Marx’s thoughts on suicide with those of Freud and Durkheim.

Specters of Marx
Written by experts in their field, this Companion surveys the challenges and provocations raised by the major voices of poststructuralism. Foucault, Deleuze, Derrida, Cixous, Lyotard, Guattari, Kristeva, Frigays, Barthes and Baudrillard. Thematically organized and clearly written, it will guide students and researchers in philosophy, literature, art, geography, politics, sociology, law, film, and cultural studies around the nature and contemporary relevance of poststructuralism.

Marxist regimes have failed miserably, and with them, it seemed, all reason to take Marx seriously. The fall of the Berlin Wall had enormous symbolic resonance: it was taken to be the fall of Marx as well as of Marxist politics and economics. This timely book argues that we can detach Marx the critic of current society from Marx the prophet of future society, and that he remains the most impressive critic we have of liberal, capitalist, bourgeois society. It also shows that the value of the 'great thinkers' does not depend on their views being true, but on other features such as their originality, insight, and systematic vision. On this account too Marx still richly deserves to be read.
